Art Unit: 2837

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1,5-7,12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Garces et al as cited by applicant in view of Ulrich and Yoshitake .

Garces et al discloses motor drive providing controller comprising voltage feedback loop acquiring voltage feedback signals measuring the voltage of three phase motor drive signals and providing voltage feedback signals to controller to correct inverter input signals to adjust voltage of three phase motor drive signals see fig 4 #52, ~~#46~~ <sup>#46</sup>. Garces et al lacks disclosing current feedback and inverter is switched output amplifier. Ulrich discloses current feed back see fig 1 #26. Yoshitake discloses inverter operating as output amplifier see col 2 lines 53-55. It would have been obvious to one of ordinary skill in the art to combine voltage feedback circuit of Garces et al with Ulrich current feedback and Yoshitake inverter as output amplifier for preventing distortion. With respect to claim 6 inverter uses IGBT as disclosed in Garces et al in col 1 lines 21-22.

3. Claims 2,3,4,8,9-11,13-16 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Welches et al , Banno et al disclose current and voltage feedback
